Since the advent of the smartphone, in many ways, every aspect of our lives can be (literally) held in the palm of our hand.

As such, the banking industry, e-commerce and media industries are all coming to the same conclusion as we embark on the last year of this decade: Digital is king and data is the future.

While the healthcare industry may be a bit slow on the uptake, nobody understands this more than Sheba Medical Center-Tel Hashomer.

With its new ARC (Accelerate Redesign Collaborate) Innovation Center, the hospital is revolutionizing how digital health can greatly enhance the care and treatment of patients in Israel and beyond.

"We're putting a big emphasis on digital health and understanding that digital health is going to be a major tool in health innovation in the next decade," said Dr. Eyal Zimlichman, Deputy Director General, Chief Medical Officer and Chief Innovation Officer at Sheba Medical Center. "There are a lot of unexploited possibilities in digital health technologies, which already exist, but have never really been applied to healthcare. They are used in information telecommunication, banking and other industries, but this can transform healthcare as we know it."
